EXECUTIVE SUMMARY**Business Overview:**

Business: Ding's Cycle Shop is a medium scale marketplace of all things on two wheels. From low end bicycles to high end Harley Davidson motorcycles, we carry it all. From new purchasing, trade-ins, roadside assistance to repair and maintenance all customer needs are solved here.

Business Problem:

Recently, Honda and Yamaha have released a new line of electric motorcycle. Till now Ding's was providing services for mechanical and gas-powered bikes and electric vehicles, a new product category must be added to the existing data. This will require changes on the inventory, services and billing databases. All three of these are currently being maintained on a mix of paper-based file system and an outdated database.

Proposed Solution:

The addition of the electric segment to the existing catalog of products and services at Ding's requires the addition of a new product category and skill updates for workers as well. The ever-changing dynamics of a growing marketplace makes it paramount that businesses continue to improve their databases for better storage and a smoother customer experience.

Major changes:

- Redesign the data and have it available on a modern database, MySQL
- Employees
 - Training employees for new certifications
 - Adding employees with certifications

Value:

The proposed redesign of the database will improve the business efficiency and process through the following ways:

- Easier for billing

- Easier for employees to track updates
- Ease of tracking customers and their inventory
- Better data security
- Remove data redundancies
- Better data uniformity across all departments

Final thoughts and next steps:

The database redesign will help Ding's maintain a comprehensive database and keep up with the constantly evolving market dynamics. It will also improve the customer experience and, therefore, the business, by improving the billing and product catalog. As new lines of bikes, hybrid or electric and gas-powered or any new kind are introduced in the market in the future, Ding's will be able to jump in on the opportunity before its competitors and benefit from being first in the market to provide.

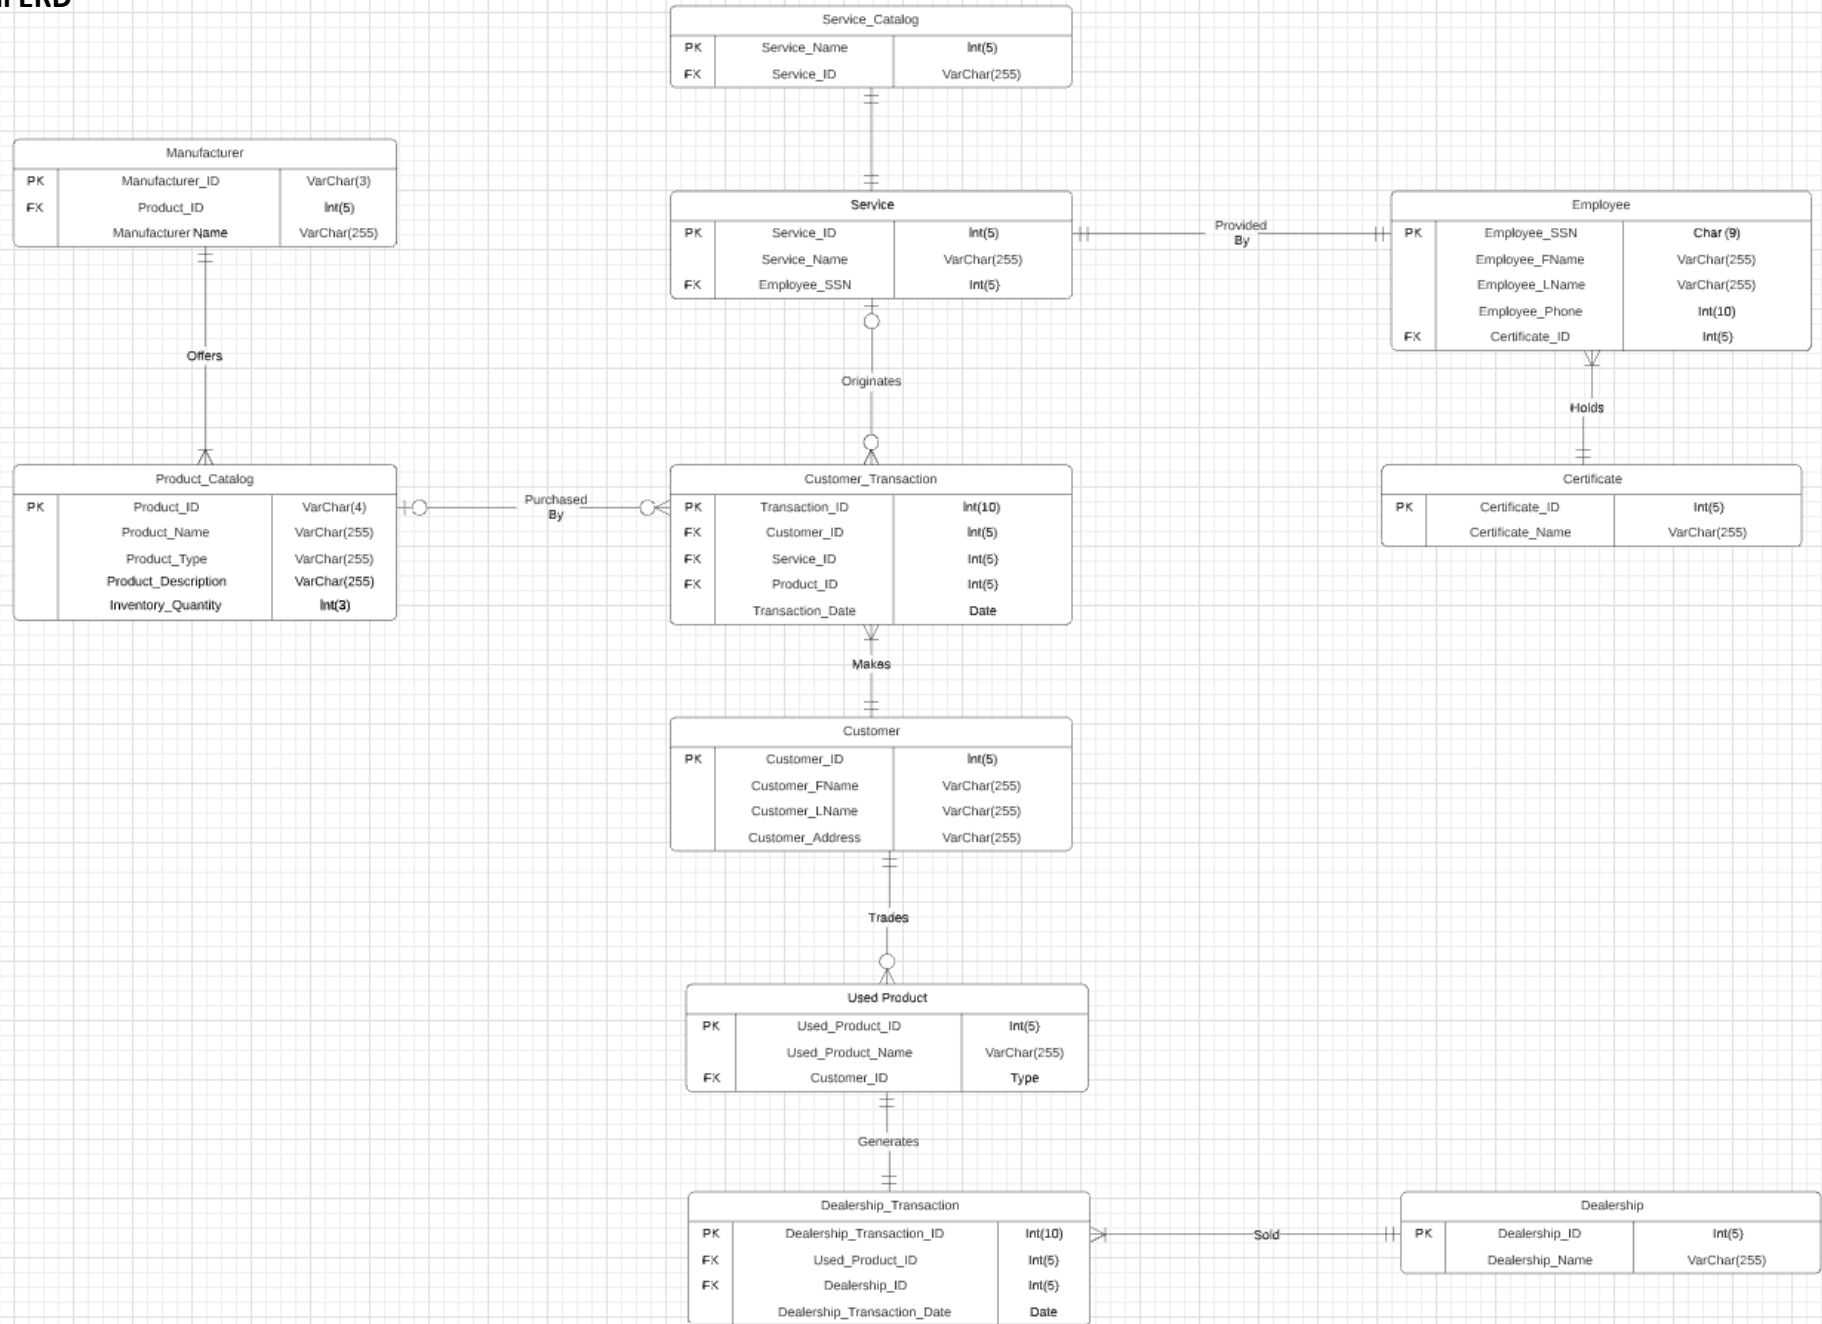

The redesign is crucial for Ding's to stay on top.

BUSINESS RULES

1. Every Manufacturer must have a Manufacturer ID (PK) and Manufacturer Name.
2. Every Product Catalog must contain Product ID (PK), Product Name, Product Type, Product Description, Inventory Quantity, and Manufacturer ID (FK).
3. Every Service must have a Service ID (PK), Service Name, and Employee SSN (FK).
4. Every Customer Transaction must have a Transaction ID (PK), Customer ID (FK), either a Service ID (FK) or Product ID (FK), and a Transaction Date.
5. Every Customer must have a Customer ID (PK), Customer FName, Customer LName, and Customer Address.
6. Every Used Product must have a Used Product ID (PK), Used Product Name, and Customer ID (FK).
7. Every Dealership Transaction must have a Dealership Transaction ID (PK), Used Product ID (FK), Dealership ID (FK), and Dealership Transaction Date.
8. Every Employee must have an Employee SSN (PK), Employee FName, Employee LName, Employee Phone number, and Certificate ID (FK).
9. Every Certificate must have a Certificate ID (PK) and Certificate Name.
10. Every Dealership must have a Dealership ID (PK) and Dealership Name.
11. A manufacturer can offer many products to the product catalog.
12. A product catalog entry is offered by only one Manufacturer.
13. A product catalog item may be requested in many customer transactions.
14. A customer transaction may request one item from the product catalog.
15. A service may be requested in many customer transactions.
16. A customer transaction may request one service.
17. A customer can make many customer transactions.
18. A customer transaction is made by only one customer.
19. A service is provided by one employee.
20. Each employee provides one service.
21. Each employee holds only one certificate.
22. Each certificate is held by at least one employee.
23. A customer may trade many used products.
24. A used product is traded by one customer.
25. A used product generates one dealership transaction.
26. A dealership transaction is generated by one used product.
27. A dealership transaction is requested by one dealership.
28. A dealership requests at least one transaction.

All repeating blocks have been removed

: Add Product Detail Entity to remove repeating block related to type, description and wheels from Product_Catalog Table

: Change [FK] in Service Entity from Employee SSN to Certification_ID

--> This allows for Certificates to be linked directly to the Service Table

--> This also removes the Employee Table from relationship with Service Table

DATABASE CREATION

1. Create Database

```
create database ding_db;  
use ding_db;
```

2. Create Tables

```
CREATE TABLE `Product_Catalog` (  
  `Product_ID` Char(5),  
  `Manufacturer_ID` Char(5),  
  `Product_Name` VarChar(255),  
  `Product_Detail` Char(1),  
  `Inventory_Quantity` int(3),  
  PRIMARY KEY (`Product_ID`)  
);
```

```
CREATE TABLE `Customer_Transaction` (  
  `Transaction_ID` Char(8),  
  `Customer_ID` Char(5),  
  `Service_ID` Char(5),  
  `Product_ID` Char(5),  
  `Transaction_Date` Date,  
  PRIMARY KEY (`Transaction_ID`)  
);
```

```
CREATE TABLE `Employee` (  
  `Employee_SSN` Char(9),  
  `Employee_FName` VarChar(255),  
  `Employee_LName` VarChar(255),  
  `Employee_Phone` Char(10),
```

```
`Certificate_ID` Char(5),  
PRIMARY KEY (`Employee_SSN`)  
);
```

```
CREATE TABLE `Certificate` (  
  `Certification_ID` Char(5),  
  `Certificate_Name` VarChar(255),  
  PRIMARY KEY (`Certification_ID`)  
);
```

```
CREATE TABLE `Service` (  
  `Service_ID` Char(5),  
  `Service_Name` VarChar(255),  
  `Certification_ID` Char(5),  
  PRIMARY KEY (`Service_ID`)  
);
```

```
CREATE TABLE `Manufacturer` (  
  `Manufacturer_ID` Char(5),  
  `Manufacturer_Name` VarChar(255),  
  PRIMARY KEY (`Manufacturer_ID`)  
);
```

```
CREATE TABLE `Used_Product` (

  `Dealership_Transaction_Date` Date,  
  PRIMARY KEY (`Dealership_Transaction_ID`));
```

3. Test all your tables before the load any data

All Tables are successfully Created.

4. Start inserting data in each table make sure referential integrity in place

- a. If you are getting an error in this stage that means your data is not correct according to the key relationships.
- b. Make sure some of the non-prime attributes accept NULL

DATA INSERTION

```

QUERY

Part 3: Chose at least two (2) tables from your project that has relationship and

- a. Show your table records.
- b. Create inner joins between two tables and explain what is the purpose of your join
- c. Create full joins between two tables and explain what is the purpose of your join
- d. Create left outer joins between two tables and explain what is the purpose of your join
- e. Create right outer joins between two tables and explain what is the purpose of your join
- f. Create intersect between two tables and explain what is the purpose of your intersect
- g. Create union between two tables and explain what is the purpose of your union
- h. Create except between two tables and explain what is the purpose of your except

3. a. Show your table records. (Above)

3.b. Create inner joins between two tables and explain what is the purpose of your join

-- Give me the names of the Products we offer along with Manufacturer's name

select M.Manufacturer_ID, M.Manufacturer_Name, P.Product_Name

from manufacturer m

inner join product_catalog p

on m.Manufacturer_ID = p.Manufacturer_ID

```
select M.Manufacturer_ID, M.Manufacturer_Name, P.Product_Name
from manufacturer m
inner join product_catalog p
on m.Manufacturer_ID = p.Manufacturer_ID
```

Input To Search Data        Cost: 3ms

< 1 > Total 10

		Manufacturer_ID	Manufacturer_Name	Product_Name
		Filter	Filter	Filter
	1	NSP01	Nimbus	Alpha
	2	NSP01	Nimbus	Seafoam
	3	NSP01	Nimbus	Cruz
	4	SC002	Schwinn	Classic Red
	5	SC002	Schwinn	Hemiway
	6	SC002	Schwinn	Bob
	7	SC002	Schwinn	Lunicycle
	8	RF003	Radio Flyer	Aventon
	9	RF003	Radio Flyer	Mars
	10	RF003	Radio Flyer	Jupiter

3.c. Create full joins between two tables and explain what is the purpose of your join

/* Full Join

Want to see full customer transaction details with product ID and product name for those orders in which we sold a product*/

```
select c.Customer_ID, C.Product_ID, C.Transaction_ID, C.Product_ID, P.Product_Name
from customer_transaction C
left join product_catalog P
on P.Product_ID = C.Product_ID
UNION ALL
```

```
Select c.Customer_ID, C.Product_ID, C.Transaction_ID, C.Product_ID, P.Product_Name
from customer_transaction C
right join product_catalog P
on P.Product_ID = C.Product_ID
where P.Product_ID is null;
```

```
select c.Customer_ID, C.Product_ID, C.Transaction_ID, C.Product_ID, P.Product_Name
from customer_transaction C
left join product_catalog P
on P.Product_ID = C.Product_ID
UNION ALL
Select c.Customer_ID, C.Product_ID, C.Transaction_ID, C.Product_ID, P.Product_Name
```

	Input To Search Data					Cost: 2ms	< 1 > Total 14
✓	Q	Customer_ID char(5)	Product_ID char(5)	* Transaction_ID char(8)	Product_ID char(5)	Product_Name	
		Filter	Filter	Filter	Filter	Filter

3.e. Create right outer joins between two tables and explain what is the purpose of your join

--Find all Services we have performed along with their transaction IDs, for those Services we have yet to perform, list them as well

select C.*, S.Service_Name

from customer_transaction C

right join service S

on C.Service_ID = S.Service_ID;

customer_transaction							
<pre>select C.*, S.Service_Name from customer_transaction C right join service S on C.Service_ID = S.Service_ID</pre>							
Input To Search Data							
Cost: 43ms < 1 > Total 9							
<input checked="" type="checkbox"/>	<input type="checkbox"/>	* Transaction_ID char(8)	Customer_ID char(5)	Service_ID char(5)	Product_ID char(5)	Transaction_Date date	Service_Name
		Filter	Filter	Filter	Filter	Filter	Filter
	1	T8883940	C1057	S0001	NULL	2021-10-08	Tire Repair
	2	T8883330	C1009	S0001	NULL	2021-11-26	Tire Repair
	3	T8882755	C1033	S0001	NULL	2021-10-12	Tire Repair
	4	(NULL)	(NULL)	(NULL)	(NULL)	(NULL)	Seat Repair
	5	(NULL)	(NULL)	(NULL)	(NULL)	(NULL)	Brake Pad
	6	(NULL)	(NULL)	(NULL)	(NULL)	(NULL)	Oil Change
	7	T8882642	C1051	S0005	NULL	2021-11-05	Electrical Diagnostic
	8	T8881349	C1064	S0005	NULL	2021-10-12	Electrical Diagnostic
	9	T8883930	C1051	S0006	NULL	2021-11-06	Chain Repair

3.f. Create intersect between two tables and explain what is the purpose of your intersect

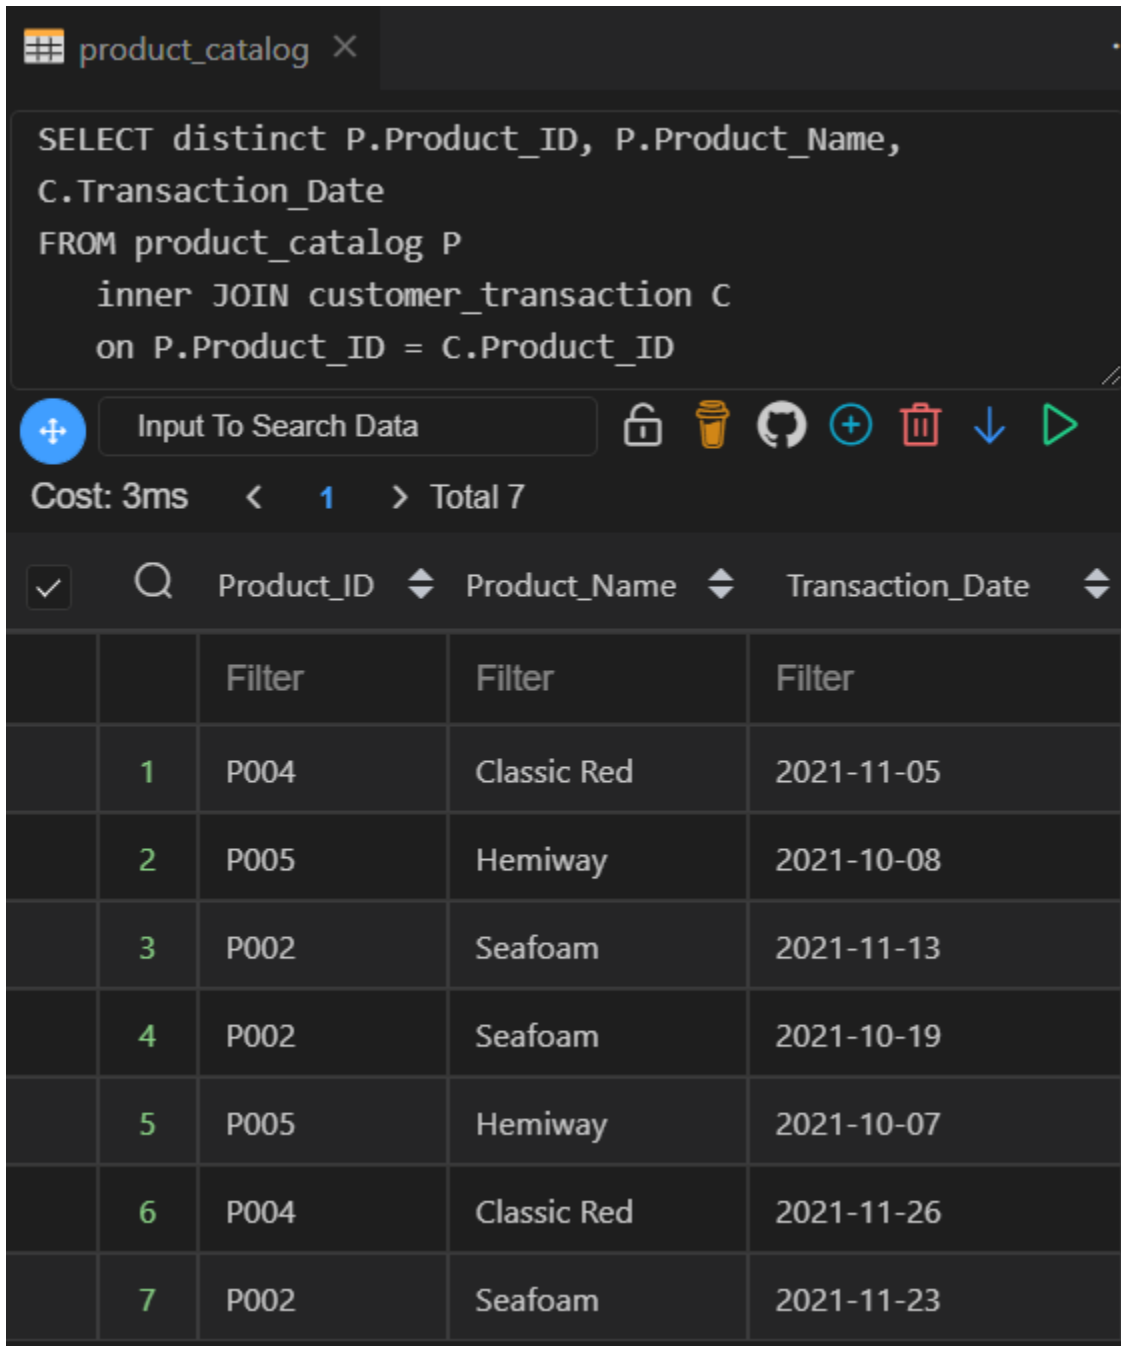

Return all individual Product which we have actually sold

```
SELECT distinct P.Product_ID, P.Product_Name, C.Transaction_Date
```

```
FROM product_catalog P
```

```
inner JOIN customer_transaction C
```

```
on P.Product_ID = C.Product_ID;
```

The screenshot shows a database query editor with a dark theme. The query is:
`SELECT distinct P.Product_ID, P.Product_Name, C.Transaction_Date`
`FROM product_catalog P`
`inner JOIN customer_transaction C`
`on P.Product_ID = C.Product_ID`
The editor shows the query has been executed successfully. Below the query, there is a toolbar with icons for search, lock, trash, refresh, add, delete, and download. The cost of the query is 3ms, and it returned 7 rows. The results are displayed in a table with columns: Product_ID, Product_Name, and Transaction_Date. The table has 7 rows of data, each with a green row number in the first column.

		Filter	Filter	Filter
1	P004	Classic Red	2021-11-05	
2	P005	Hemiway	2021-10-08	
3	P002	Seafoam	2021-11-13	
4	P002	Seafoam	2021-10-19	
5	P005	Hemiway	2021-10-07	
6	P004	Classic Red	2021-11-26	
7	P002	Seafoam	2021-11-23	

3.g.Create union between two tables and explain what is the purpose of your union

--Get the product id and dates of all PRODUCTS and USED PRODUCTS, NOT SERVICE transactions that the customers have conducted in november

Select product_id, transaction_date from customer_transaction

where month(transaction_date) = 11 and product_id is not NULL and product_id not like "NULL"

UNION

Select used_product_id, Dealership_Transaction_Date from dealership_transaction

where month(Dealership_Transaction_Date) = 11;

```
Select product_id, transaction_date from customer_transaction
where month(transaction_date) = 11 and product_id is not NULL and product_id not like "NULL"
UNION
Select used_product_id, Dealership_Transaction_Date from dealership_transaction
where month(Dealership_Transaction_Date) = 11
```

Input To Search Data

Cost: 9ms < 1 > Total 13

		Filter	Filter
1	P004	2021-11-05	
2	P002	2021-11-13

13	P5312	2021-11-27	

3.h. Create except between two tables and explain what is the purpose of your except

--Want to know all products we have yet to sale

```
select P.Product_Name, P.Product_ID
from product_catalog P
where not EXISTS
  (select P.Product_ID
   from customer_transaction C
   WHERE P.Product_ID = C.Product_ID);
```

```
select P.Product_Name, P.Product_ID
from product_catalog P
where not EXISTS
  (select P.Product_ID
   from customer_transaction C
   WHERE P.Product_ID = C.Product_ID)
```
